NOTES

Most my videos on YouTube are saved with a resolution of 1920x1080 with each image lasting 6 seconds.

If viewed with the app VLC (in pause mode) the images can be individually saved with the command [Shift+S].

This method is slow but retrieves JPG files as clear as the original JPG recorded .

When downloaded the video can be decoded by an app that retrieves all the JPG files automatically
(such as "Free Video to JPG Converter")

But the free version of this app does not provide pictures as clear as VLC does.
